

Use Cycle Overview

Use Cycle Overview

- 1) App sends request to API for images
- 2) App displays images to user
- 3) User swipes on images
- 4) App sends likes and dislikes to API, along with user preferences
- 5) Recommender sends shortlist of hikes to classifier
- 6) Classifier predicts liked photos and sends to image database
- 7) Database takes user preferences from API and predicted likes from classifier, prepares next images for app

Repeat as necessary
